Regulations on the Management of Hazardous Chemical Safety Information Codes (Trial)

Article 1 In order to regulate the management and use of hazardous chemical safety information codes, and promote the effective transfer of hazardous characteristics, safe disposal and other information of hazardous chemicals, these Regulations are hereby formulated in accordance with the *Regulations on Management of Hazardous Chemical Safety*, the *Opinions of the General Office of the Central Committee of the Communist Party of China and the General Office of the State Council on Comprehensively Strengthening the Safety Production of Hazardous Chemicals*, the *Opinions of the General Office of the State Council on Accelerating the Construction of Important Product Traceability System* (No. 95, 2015 of the General Office of the State Council) and other regulations.

Article 2 A hazardous chemical safety information code (hereinafter referred to as the “safety information code”) is a QR code that consists of the hazardous chemical registration number or serial number, unit identification code, query website, etc., which carries information such as hazardous characteristics and safe disposal of the hazardous chemical.

Each hazardous chemical produced and imported by every enterprise shall correspond to a unique safety information code.

Article 3 Scanning the safety information code or querying the hazardous chemical registration number or serial number makes it available to read the hazardous chemical’s name, registration number, hazard statement, first aid measures, accidental release measures, extinguishing methods, enterprise name and emergency contact information, as well as other information added by the enterprise, and also to download the material safety data sheet (MSDS) and the safety label.

Any safety information code holder shall be responsible for the authenticity and quality of the relevant information. Enterprises can independently edit product specification information including product package and other information required for enterprise business.

Article 4 The safety information code management shall be implemented for the chemicals listed in the *Inventory of Hazardous Chemicals (2015 Edition)* and other chemicals that conform to the determining principle of hazardous chemicals.

Hazardous chemicals subject to business and use within the territory of the People’s Republic of China shall be provided with a safety information code.

Article 5 After hazardous chemical production and import enterprises have completed the approval of MSDSs and safety labels, and have obtained the hazardous chemical registration certificates, the safety information code will be generated through the Hazardous Chemical Registration Information Management System.
