Organic Products – Requirements For Production, Processing, Labeling And Management System

1 Scope

This standard specifies the requirements for production, processing, labeling and management system of organic products.

This standard shall apply to the production of organic plant, animal and microorganism products, the processing of organic food, feed and textiles, and the packaging, storage, transportation, labeling and selling of organic products.

2 Normative References

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

GB 2721 National food safety standard – Edible salt

GB 2760 National food safety standard – Standards for uses of food additives

GB 3095 Ambient air quality standard

GB 4287 Discharge standards of water pollutants for dyeing and finishing of textile industry

GB 5084 Standards for farm irrigation water quality

GB 5749 Standards for drinking water quality

GB 11607 Water quality standard for fisheries

GB 14881 National food safety standard – General hygienic practice for food production

GB 15618 Soil environmental quality – Risk control standard for soil pollution of agricultural land

GB 18596 Discharge standard of pollutants for livestock and poultry breeding

GB/T 18885 Technical specifications of ecological textiles

GB 20814 Limit and determination of the quantity of heavy-metal elements in dye products

GB 23350 Requirements of restricting excessive package – Foods and cosmetics

3 Terms and Definitions

The terms and definitions defined in GB 2721, GB 2760, GB 3095, GB 4287, GB 5084, GB 5749, GB 11607, GB 14881, GB 15618, GB 18596, GB/T 18885, GB 20814, GB 23350 and terms below are applicable to this document.

3.1

Organic production

The agricultural production mode, that shall follow specific production principles, not use organisms and their products obtained by genetic engineering as well as chemically synthesized pesticides, fertilizers, growth regulators, feed additives and other substances during the production, follow the natural law and ecological principle, coordinate the balance between the planting industry and breeding industry, and maintain the sustainable and stable production system.

3.2

Organic processing

The processing mode, that shall mainly use organic ingredients, not use organisms and their products obtained by genetic engineering during the processing, use chemically synthesized additives, processing aids, dyes and other inputs as little as possible, and maintain the nutritional components and/or original attributes of the products to the greatest extent.

3.3

Organic product

The product for human consumption and animal consumption, which are produced organically and processed organically.

Note: In this standard, "organic" can be marked before the name of specific organic products or product categories, such as organic seeds, organic sprouts and organic ingredients, etc.

3.4

Conversion period

The period between the time beginning to implement organic production and the time obtaining organic product certification of the production unit and the product.
